## Physical security

*Network security group rules planning worksheet*

Use this worksheet to think about what components and services you may have in some of your applications. What ports and protocol do they use, what direction does the traffic need to be allowed?

For source and destination, where will the traffic be coming from, and do you want to scope where the traffic is going to?

| Application | Type | Port | Protocol | Direction | Source | Destination |
|---|---|---|---|---|---|---|
| Front-end web | HTTP | 80, 443 | TCP | Inbound | * | Web VMs |
| Middleware | SQL | 1433 | TCP | Inbound | Web VMs | DB VMs |
